

Homework Assignment

22

Coding School

- The start screen you get has a background showing the provinces of Sri Lanka.
- When you click on the landmarks used in each province, the provincial flag of that province should be displayed
- Do this assignment as learned in Project 22. The necessary provincial flags have been used in the collection of pictures

According to the provinces where the landmarks are located, identify the respective provincial flags. After that click at the bottom of this page and check if correct

Finish!!

Northern

North West

Western

Sabaragamuwa

North Central

Eastern

Central

Uva

Southern

Let's consider an example

To display the flag of the Northern Province when clicking on the landmark used in the Northern Province

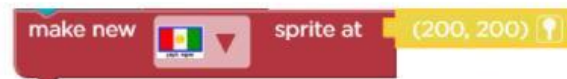

- First let's identify the landmark used in the Northern Province.

- When the landmark is clicked, it should be removed first.

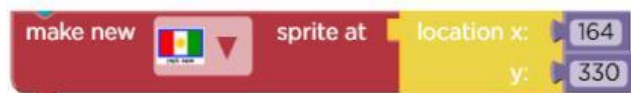

- Now let's display the flag of the Northern Province.

- Now let's identify the x and y position (164,330) related to the landmark of the Northern Province.

- X and Y position (164,330) should be adjusted to the position of the Northern Province flag.

In this way, set the block so that when the landmarks of all the remaining provinces are clicked, the respective province flags will be displayed
