## Combustion, oxidation and fermentation

- 1. A chemical combination of fuel mixing rapidly with oxygen.
- 2. A chemical reaction where fungi produce alcohol and carbon dioxide.
- 3. A chemical reaction that produces rust.
- 4. A chemical reaction where bacteria produce lactic acid and carbon dioxide.
- 5. A chemical reaction that produces smoke and ash.
- A chemical reaction where oxygen changes the chemicals in food.

Which reaction is taking place in each photo? Write combustion, oxidation or fermentation.
