

Read the text and answer the questions

Anna is a young journalist who works for an online magazine. She likes to write about **innovation** and **society**. She often uses the internet to **access** information and **download** documents for her articles. She also likes to **exchange** opinions with other writers and **critics** on social media.

One day, she heard that a new app was going to be **launched** by a famous company. The app was supposed to help people **avoid theft** and protect their **private** data. Anna was curious about the app and decided to write a review about it. She contacted the company and asked them to send her a link to **download** the app.

The company agreed and sent her an email with the link. Anna clicked on the link and started to **download** the app. However, she soon realized that something was wrong. The app was not what she expected. It was actually a virus that hacked her phone and stole all her personal information.

Anna was shocked and angry. She tried to **get rid of** the virus, but it was too late. The hackers had already used her information to make fake accounts and **purchase** things online. They also sent spam messages to her contacts and **promoted** the virus to other people.

Anna felt helpless and scared. She didn't know what to do. She wondered how many people had fallen for the same trap. She decided to write an article about her experience and warn others about the dangers of downloading unknown apps. She hoped that her article would make a difference and help people protect their **human rights**.

She also learned a valuable lesson: not everything that looks like an **innovation** is good for **society**. Sometimes, it is better to be careful and **check in** before downloading anything from the internet. As the saying goes, believe it or not, it is better to be safe than sorry.

Quiz Questions:
