Bodies of Water

Match the body of water with its definition.

A very large, thick mass of ice that stays frozen from one year to the next.	Glacier
A long stream of water that flows through a channel on the ground.	Lake
A great body of water that covers much of the Earth's surface. It is usually found between continents. It is salt water.	River
A large body of water that is surrounded by land. It is a very important source of freshwater.	Stream
A small area of still, fresh water. It is different from a river or a stream because it does not have moving water and it differs from a lake because it has a small area.	Ocean
A body of water that is shorter than a river. It needs both gravity and water to exist.	Pond
