POST	DESCRIPTION
	a job title whose responsibilities include ensuring that a software project meets established quality guidelines.
	a position responsible for making complex data structures easy to understand and navigate; especially critical at the beginning of new software development projects to ensure the application performs in a useful way for its intended end-users
	a position responsible for the creation and maintenance of documentation relating to an IT project including online help, user guides, white papers, and design specifications
	a position responsible for organizing and delivering a project on time and on budget; often acts a bridge between developers and stake-holders
	a position responsible for setting best practices for securing wi-fi networks, servers, backups, laptops, and VPNs.
	a high-level position responsible for understanding a business's overall needs and then designing an IT structure to support it
	an executive position responsible for internal processes and practices; normally has a stronger business administration background than technical background
	a position responsible for the creation of images, typography, mock-ups for an organizations's front end systems; normally works under a company Art Director
	a position responsible for gathering information around a programming task and performing it.
	a person in charge of managing and maintaining relational databases and their access rights.
	an executive position responsible for all scientific and technological issues related to a company; normally has a strong technical and somewhat less strong management background
	a position responsible for front-line maintenance, repair of the Office IT infrastructure and well as on-demand support for end-users
	a position responsible for maintenance of all aspects of a computer network; often a specialist in TCP/IP, Linux, and related routing technology such as Cisco
	a position responsible for programming and optimizing databases.
	a job position acting as a bridge between upper management and IT; one who encourages personal development in IT staff; the boss of an IT worker
	a job title whose responsibilities include ensuring appropriate performance for a software project and organizing and instructing testers
