## Renewable and Non-Renewable Energy

**Instruction:** Read through the information below. Then answer the following question.

Fossil fuels such as coal, petroleum, and natural gas are a **nonrenewable** source of energy. The supply is limited because it takes millions of years to change living materials into fossil fuels.

Solar energy and wind energy are examples of **renewable** source of energy. Renewable means that the energy source does not run out.

### 1. Choose the correct answer.

 Solar Energy	 Hydropower Energy	 Geothermal Energy	 Petroleum	 Coal
 Biomass Energy	 Nuclear Energy	 Wind Energy	 Natural Gas	 Oil
