

1 **Exam** Complete the article.

Climate Change — the facts!

First of all, you need to know that the problem is real. Average temperatures been going up a lot the last 50 years.

Did you know that we've greatly increased the amount of carbon dioxide in the air the 1960s? More than 90 percent of scientists say this is because of emissions from burning fossil fuels and from using more cars.

The Arctic has getting much warmer over the last 20 years, causing ice to melt and sea levels to rise.

A number of scientific reports are beginning to raise awareness the issue of possible mass extinction of animals and plants as temperatures and sea levels rise.

But we can do things to stop climate change. We need more solar energy and power. We need to protect our forests and to stop using fossil fuels. Let's get out there and protest! It's not too late—yet!

2 Choose the correct answers.

- Cassie has been working to save the rainforest many years.
