

Complete the following table. (5 points)

Number	Factors	Prime or Composite
33		
42		
16		
23		
51		
63		

Write the prime factorization of each number using exponents. (4 points)

140= _____

72= _____

Find the GCF and LCM by using the LISTING METHOD. Show your work. (4 points)

14 _____	14 _____
35 _____	35 _____
GCF of 14 and 35= _____	LCM of 14 and 35= _____

Prime factorize to find the LCM and GCF of the following numbers. (4 points)

36= _____

24= _____

GCF of 36 and 24= _____

LCM of 36 and 24= _____

Solve. (8 points)

$7+3^3 \div 3 - 2 =$ _____

$3 \times 12 - (8 + 2) =$ _____

$(100 \times 5) - 200 + 10 =$ _____

$(1+4) - (3-2)^9 =$ _____

Solve the following problems. Show your work. (4 points)

Mohammad says that the prime factorization of $144 = 3 \times 3 \times 16$. Is he right or not? Explain.

The owner of a supermarket receives 15 crates of 54 cans of peas each. He sells 325 cans. How many cans does he still have?
