Drought is a condition that results when average rainfall for a fertile area drops far below the normal amount for a long period of time. In areas which are not irrigated, the lack of rain causes farm crops to wither and dead. Higher than normal temperatures usually accompany periods of drought. They add to the crop damage. Forest fires start easily during drought. The soil of a drought area becomes dry and crumbles. Often the rich topsoil is blown away by the hot, dry winds. Streams, ponds, and wells often dry up during a drought, and animals suffer and may even die because of the lack of water.

A. Causes and effects of drought

B. Forest fires

C. Common average rainfall

D. The importance of soil

A burn is an injury to the skin caused by exposure to fire, hot liquids or metals, chemicals, electricity or the sun's ultraviolet rays. When someone gets a burn, it's necessary to provide first aid right away. First aid for burns involves removing the source of the burn as soon as possible. The burns should be cooled immediately with cold water. A clean, cold wet towel or dressing can be placed on less serious burns to ease pain and protect the burns from contaminating. If the burn is caused by chemicals, it should be bathed continuously with running water for at least 20 minutes to reduce the substance. Wet dressings should never be used for burns. Instead, the first - aid provider should gently apply dry, sterile dressing held in place by bandages and seek immediate medical attention.

If the burn is caused by chemicals, it should be put in water for about 20 minutes.
