

Match the correct condition with each description below. Not all conditions need to be used. Each condition can be used only once.

Antibodies	molecules on a pathogen that trigger an immune response in a host
Antigens	reaction that occurs at site of infection
memory cells	drugs that cannot be used to treat oral candidiasis
Phagocytes	cells that recognize a specific pathogen from one infection to the next
red blood cells	an inactive form of a pathogen
immune proteins	drugs that cannot treat bacterial or viral infections
Fever	wash away bacteria and have anti-microbial properties
Inflammation	serve as host cells for malaria protozoan
Vaccine	white blood cells that engulf invading pathogens
resident micro-organisms	live on or in a host and prevent colonization by pathogens
specific immunity	
Antibiotics	
Tears	
anti-fungal agents
