

Task 1: Match each supporting idea with a suitable further explanation.

First, avoid the use of single-use goods, such as paper cups and plastics.	Second, encourage people to use public transport instead of personal vehicles.	Third, don't litter.	Finally, save water.
--	--	----------------------	----------------------

This can help to minimize the effects of drought and water shortages.	This will reduce the amount of waste to the environment.	This will decrease greenhouse gas emissions.	This will make the environment always clean and beautiful.
---	--	--	--

Task 2: Choose the best example or explanation for each of the following supporting ideas.

1. Firstly, we should change our diet.

- A. We can eat less meat and eat more vegetables.
- B. We can buy second-hand clothes.
- C. Two-thirds of greenhouse gas emissions come mainly from this.

2. We can pick up litter in the neighbourhood regularly.

- A. This can help us save water in the neighbourhood.
- B. This will make the neighbourhood cleaner and more beautiful.
- C. This will help to reduce our waste for the environment.

3. Third, we must decrease the amount of waste that we produce.

- A. We can use washable cloth napkins instead of paper napkins.
- B. We can use plastic bags and bottled water.
- C. We can buy local food or organic food.

4. Finally, we should learn to reuse products in different ways.

- A. For example, coffee cans can be used to pack lunch.
- B. For instance, old newspapers can be used as wrap packages in food stores.
- C. Both A & B are correct.

5. Using less water is a good way to reduce your carbon footprint.

- A. To give an example, we only boil the water we need.

B. For example, we can have short showers rather than baths.

C. Both A & B are correct.

6. We should recycle as much as possible.

A. To give an example, plastic bottles can be used to plant trees.

B. For example, we can use electronic mails instead of using papers and envelopes.

C. Both A & B are correct.
