Space Race

It began in 1955 with the USA and USSR after World War II. It was the Cold War, which meant competition in every area, including space. Soviets launched the first artificial satellite, Sputnik I in 1957, Sputnik II with the first living thing in space, and then Sputnik III. Even though the US was trying to send a rocket with a man to orbit the planet quickly, the Soviets had already done it in 1961, sending Yuri Gagarin, the first man to enter the Earth's orbit.

Laika

During the era of the Space Race between the USA and USSR, the Soviet Union launched the first living thing into space. It was a dog named Laika. The objective of the trip was to prove that space travel for humans was safe but technology hadn't advanced enough to bring ships back yet. Laika was a street dog that became an astronaut because of her size and calmness. After some training, she was ready to go into space. Her ship called Sputnik 2 was launched on November 3, 1957. Laika was supposed to orbit the planet some days and the first reports from Russian space programs said so. However, in 1993, some Russian space program scientists revealed that Laika died soon after leaving the planet's atmosphere because of stress and overheating. Many people in the world were in great sorrow because of her death. Since then, her story has spread around the world and has inspired many tales, songs, and poems. Some of them say that Laika became a star in the sky.
