The followings are the steps of setting started with cup cut, match the instruction and the picture provided by drawing a line!

1 **Download the app.** CapCut is available to download on iPhone and Android devices. Navigate to your respective application store (i.e. Apple App store or Google Play Store).[1]	
2 **Tap on the 'Search' icon in the lower right corner.** Next, tap on the top search bar and type in 'CapCut.' • If using an Android with Google Play, tap on the top search bar labeled, 'Google Play' and type in 'CapCut.' • In your search results, tap on the app titled 'CapCut - Video Editor.'	
3 **Tap the Download/Install button.** It is completely free to download!	
4 **Give CapCut access to your camera roll.** This allows you to insert the video clips you want to edit! Open the app and tap on the "New Project" button at the top of your screen.	
5 **Tap on the green 'Confirm' button.** This acknowledges that CapCut needs access to your photos. On the next pop up window, tap the button that allows access to all photos. • You will only need to complete this step the first time you open the app!

Method 1 **Getting Started with CapCut**

The followings are the steps of familiarizing yourself with the interface, match the instruction and the picture provided by dragging the instruction below!

Drop here

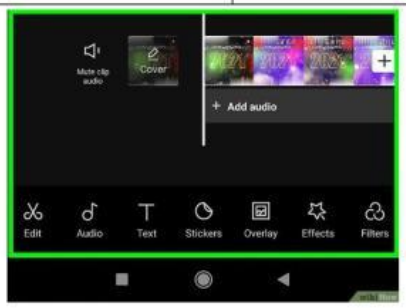

Drop here

Drop here

Drop here

Drop here

Get to know your workspace. CapCut directs you to your primary workspace after you upload your first clip. This is where you will spend most of your time in the app. From top to bottom, there's the preview panel, timeline, and toolbar.

View the preview panel. This is the top half of your screen and it displays a preview of what your edited video clip will look like.

Start a New Project. After opening the app, tap on the "New Project" button - a new screen will pop up that displays your camera roll videos.

View the timeline and toolbar. These are the bottom half of your screen. The timeline is below the preview panel and it is where you will perform all your edits. The toolbar at the very bottom of your screen contains all of your editing tools like split, audio, text, stickers, effects, and more.

Select a video clip. Locate which video clip you want to add to your project by scrolling through the new page that shows your camera roll. Tap on the thumbnail of desired video and tap the "Add" button in the lower right corner of your screen.[2]

- For now, you are just choosing one video clip. We'll guide you through adding more clips in a later step.

Method 3 Completing Basic Editing

The followings are the steps of completing basic editing, now read the steps by clicking the microphone!	
	**Trim video clips.** "Trimming" in video editing is when you shorten the beginning or end of your video.
	**Join video clips.** If you want to add more clips to your project, use the 'Join' tool to do so.
	**Split video clips.** To split a clip in two, drag the timeline until the play head is where you want to split.
