

Step Sums

Division with Remainders

Steps to Remember:

- The number **on** the step tells us which table to use.
- Start with the **first** digit.
- Write any remainder beside the next digit.
- Once you've finished the sum, write any remainder at the end with an r. (e.g. r3)

Example

Start with $7 \div 4$

$7 \div 4 = 1 \text{ r}3$

$4 \overline{) 73}$

$18 \text{ r}1$

3 now becomes 33

$33 \div 4 = 8 \text{ r}1$

Now try these - look back at the steps to remember if you get lost.

$$\underline{5} \overline{) 62}$$

$$\underline{4} \overline{) 86}$$

$$\underline{3} \overline{) 53}$$

$$\underline{9} \overline{) 97}$$

$$\underline{6} \overline{) 80}$$

$$\underline{7} \overline{) 99}$$

$$\underline{7} \overline{) 729}$$

$$\underline{4} \overline{) 822}$$

$$\underline{8} \overline{) 853}$$

$$\underline{3} \overline{) 926}$$

$$\underline{4} \overline{) 425}$$

$$\underline{5} \overline{) 524}$$
