

Write the missing numbers (Do not simplify). Look at the example:

$$\frac{1}{4} \text{ of } 3 = \boxed{3} \times \boxed{1} \div \boxed{4} = \frac{\boxed{3}}{\boxed{4}}$$

1. $\frac{1}{5} \text{ of } 3 = \boxed{} \times \boxed{} \div \boxed{} = \frac{\boxed{}}{\boxed{}}$

2. $\frac{1}{9} \text{ of } 3 = \boxed{} \times \boxed{} \div \boxed{} = \frac{\boxed{}}{\boxed{}}$

3. $\frac{3}{4} \text{ of } 3 = \boxed{} \times \boxed{} \div \boxed{} = \frac{\boxed{}}{\boxed{}}$

4. $\frac{8}{10} \text{ of } 3 = \boxed{} \times \boxed{} \div \boxed{} = \frac{\boxed{}}{\boxed{}}$

5. $\frac{6}{2} \text{ of } 3 = \boxed{} \times \boxed{} \div \boxed{} = \frac{\boxed{}}{\boxed{}}$

6. $\frac{4}{5} \text{ of } 3 = \boxed{} \times \boxed{} \div \boxed{} = \frac{\boxed{}}{\boxed{}}$

7. $\frac{2}{7} \text{ of } 3 = \boxed{} \times \boxed{} \div \boxed{} = \frac{\boxed{}}{\boxed{}}$

8. $\frac{6}{7} \text{ of } 3 = \boxed{} \times \boxed{} \div \boxed{} = \frac{\boxed{}}{\boxed{}}$
