

1. Tom wants to tile his kitchen floor, which is in the shape of a square measuring 10 feet on each side. How many square feet of tiles does he need?

**Area of Square = side x side**

$$A = \underline{\hspace{1cm}} \times \underline{\hspace{1cm}}$$

$$A = \underline{\hspace{1cm}} \text{ sq. ft.}$$

2. Sarah's rectangular backyard measures 20 meters in length and 15 meters in width. If she wants to install artificial grass, how many square meters of grass does she need?

**Area of Rectangle = length x width**

$$A = \underline{\hspace{1cm}} \times \underline{\hspace{1cm}}$$

$$A = \underline{\hspace{1cm}} \text{ sq. m}$$

3. A triangular garden bed has a base of 6 meters and a height of 8 meters. What is the area of the garden bed?

**Area of a triangle =  $\frac{\text{base} \times \text{height}}{2}$**

$$A = \frac{\underline{\hspace{1cm}} \times \underline{\hspace{1cm}}}{2}$$

$$A = \frac{\underline{\hspace{1cm}}}{2}$$

$$A = \underline{\hspace{1cm}} \text{ sq. m}$$

4. A field has the shape of a parallelogram with a base of 12 meters and a height of 5 meters. What is the area of the field?

**Area of parallelogram = base x height**

$$A = \underline{\hspace{1cm}} \times \underline{\hspace{1cm}}$$

$$A = \underline{\hspace{1cm}} \text{ sq. m}$$

5. An amusement park has a trapezoidal fountain with a top length of 8 meters, a base length of 12 meters, and a height of 6 meters. What is the area of the fountain?

**Area of a Trapezoid =  $\frac{(\text{base1} + \text{base2}) \times \text{height}}{2}$**

$$A = \frac{(\underline{\hspace{1cm}} + \underline{\hspace{1cm}}) \times \underline{\hspace{1cm}}}{2}$$

$$A = \frac{\underline{\hspace{1cm}} \times \underline{\hspace{1cm}}}{2}$$

$$A = \frac{\underline{\hspace{1cm}}}{2}$$

$$A = \underline{\hspace{1cm}} \text{ sq. m}$$
