

Language Arts Assessment - Week 3

Task 1: Try to use the structure “used to” whenever possible by clicking on the correct words.

1. I used to be/was thin when I was younger.
2. The Ancient Egyptians used to wear/wore make up often.
3. I used to go/went to the store yesterday to buy some supplies.
4. I used to make/made many friends when I was in school.

Task 2: Change the following words to their verb or noun form.

Estimate	
Coordinate	
Punctuate	

Navigation	
Location	
Situation	

Task3: Click the correct form of the verb from the options below.

1. Everything is/are so expensive in this store.
2. Everyone go/goes to school.
3. They receive/receives supplies from the grocery store.
4. She look/looks like she’s about to fall asleep.
5. If you need/needs anything, please let me know.
6. Does anyone want/wants a bit chocolate cake?

Task 4: Read the following passage.

Take a look at your neighbor's eyes. The first thing you'll probably notice is the color of their eyes. Most people have brown, blue, or green eyes. Some people may have hazel, gray, or violet eyes. The colored part of the eye is called the **iris**.

Next you'll notice the **pupil**. The pupil is the black circle in the center of the iris. The pupil controls the amount of light that enters the eye. If you're in a very bright room, you'll notice that your neighbor's pupils are very small. This allows only a little bit of light to enter. If you are in a dark space, your neighbor's pupils will be much larger. This allows more light to enter the eye.

The eye is actually shaped like a ball. Eyes sit in a socket in the skull. When light enters the pupil, it hits the back of the eye, called the **retina**. After, the retina sends a visual message to the brain. Finally, when the brain gets the message, vision occurs.

Number the events below in the correct sequence they happened.

- _____ The pupil becomes very small if you are in a bright room.
- _____ You notice the color of the eyes.
- _____ The retina sends the visual message to the brain.
- _____ Look at your neighbor's eyes.
- _____ The light enters and hits the back of the eye.
- _____ You notice the pupil.

Task 5: Vocabulary: Choose the correct vocabulary word and insert them in the sentence(s) below.

1. You can feel your _____ by holding two fingers against your neck or your wrist.
2. Oxygen has two atoms and it is written as O₂ whereas _____ is written as CO₂ because it carries two atoms of oxygen and waste.
3. _____ unlike arteries function by sending blood back to your heart.
4. The circulatory system is a system that is regulated by the _____ as the main organ.
5. First discovered in 1661, the _____ connect the veins and arteries and are responsible for bringing nutrients and oxygen to tissues and blood cells.
6. The windpipe, also known as the _____ allows for the flow of oxygen from the nose to the lungs.
