Microsoft 365 Account**

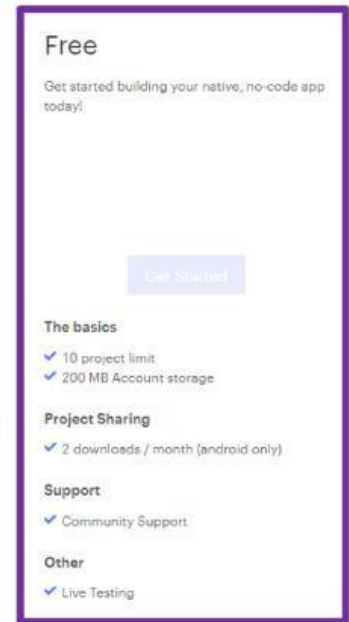

Thunkable allows you to create 10 projects and use 200MB account capacity for free. Thus, within a capacity limit of 200MB, you can maintain 10 Thunkable projects in your account.

So if you want to create another new project after creating 10 projects, you have to delete your old project and get space for it.

As a solution to this, by creating another Thunkable account, you have the opportunity to use up to 20 projects for free in those two accounts. For this, let's consider how to create a new account on the Thunkable website using the Microsoft 365 account provided to you by DP Education.

Watch the video below and set up a new account on the Thunkable website using your Microsoft 365 account.
