Look at the warthog's file and complete it with the missing headings.

Warthog

Mammals

Phacochoerus africanus

FAMILY	Suidae	It is common in Mauritania, Ethiopia, South Namibia. It prefers open and forested savannas, grassy plains, semi-deserts. It's scarce fur is either black or brown, with a large mane on the head. Its body length varies between 90-150 cm.
	Africa	
	50-150 kg	Its tail is long, ending in a tuft. It wears two warts on both sides of its head, and a pair of them on the lower chin. In an unusual way, it needs to kneel down to eat, as its neck is very short and its legs are quite long.
	7-11 years	
	savanna	Due to its scarce fur and thin fat layer it is very sensitive to extreme temperature changes. It is eating carcasses and feces as well. It is characterized by a mutualistic connection with the red- and yellow-billed oxpecker, which is freeing it from pests.
	solitary or group	
	grass, leaves, herbs, fruit, carcasses, feces	
	jackal, lion, hyena, leopard, crocodile
