

See the drawing below for isometric view from an orthographic projection and answer the following questions.

Which isometric view corresponds to the following orthographic projection?

The orthographic projection shows three views of a mechanical part:

- End Elevation:** A square with a quarter-circle arc in the top-left corner and a small dot in the center.
- Front Elevation:** A rectangle with a horizontal line near the top, creating a smaller rectangle on the right side.
- Plan (Top):** A rectangle with a horizontal line near the bottom, creating a smaller rectangle on the left side.

A large blue question mark is placed above the isometric options.

Three isometric views are shown below:

- (A) A rectangular block with a quarter-circular cutout on the top-left corner.
- (B) A rectangular block with a semi-circular top surface.
- (C) A rectangular block with a semi-circular cutout on the top surface.
