PART III: READING COMPREHENSION

I. Read the passage then choose the best answer to each question that follows. Identify your answer by writing the corresponding letter A, B, C or D on your answer sheet.

THE ATMOSPHERE OF VENUS

Venus, also called the Morning Star and Evening Star, is the second-closest planet to the sun and the brightest object in the night sky. The planet orbits the sun every two hundred and twenty four Earth-days and is sometimes referred to as Earth's sister planet because the two share both a similar size and bulk. What is not similar, however, is Venus's atmosphere in comparison to Earth's atmosphere.

The atmosphere on Venus is much heavier and has a higher density than **that** of Earth. Venus's atmosphere also expands significantly higher than Earth's atmosphere although a thick cloud cover makes the surface of Venus nearly impossible to see unless observed through radar mapping.

While the pressure and temperature of Venus's upper atmosphere are comparable to those of Earth, the heat and pressure of the lower atmosphere are not unlike a furnace. Venus's atmosphere is very thick due to a composition consisting mainly of carbon dioxide, and a small amount of nitrogen. **If man could survive the extreme heat of Venus's surface (400 degrees Celsius), then he would have to contend with a surface pressure that is more than 90 times that of Earth.** Venus's extremely high temperature is thanks to the greenhouse effect caused by such a large amount of carbon dioxide. The greenhouse effect is a process by which the sun's infrared radiation is more readily absorbed by the atmosphere. Just like in a real greenhouse used to grow plants years round, the proliferation of carbon dioxide traps radiation and warms Venus's atmosphere. Due to this phenomenon, Venus boasts a higher atmospheric temperature than Mercury, even though Venus is twice the distance from the sun.

However, scientists postulate that Venus's atmosphere was not always so hot. **[A]** Studies show that large bodies of water were once on Venus's surface but that eventually evaporation of all the water caused the runaway greenhouse effect which regulates the planet today. **[B]** Thus Venus has become a critical study for today's scientists, as human being are only beginning to struggle with the early stages of the greenhouse effect. **[C]** Our problems do not stem from

evaporated water supplies but from a **propagation** of carbon dioxide and other greenhouse gases due to industrial and automobile emissions. [D]

Another interesting characteristic to note regarding Venus's atmosphere is that its daytime temperatures and nighttime temperatures are not that far removed from each other. This is due to the thermal inertia, the ability of a substance to store heat despite changing temperatures and the transfer of heat by Venus's strong winds. Although winds on the surface of Venus move slowly in comparison with Earth's winds, Venus's air is so dense that a slow-moving there can move large obstructions and even skip stones along the planet's surface.

In 1966, humankind made its first attempt at sending a recording instrument into Venus's atmosphere. The Venera 3 probe did collide with Venus surface; however, the abrupt impact caused its communication system to fail, and it was unable to send and feedback. In 1967, Venera 4 successfully enter Venus's atmosphere and was able to take many readings, one of which recorded that Venus's atmosphere was between ninety and ninety-five percent carbon dioxide. Subsequent Venera probes were sent into Venus's atmosphere, but most of them succumbed to the crushing air pressure.

Questions 1-7: Choose the answer (A, B, C or D) which you think fits best according to the passage.

15. According to paragraph 1, Venus is named the Morning Star and Evening Star because_____.
- A. it is very bright
B. it is close to the sun
C. it can be seen from evening till morning
D. it is used to find the direction by sailors
16. The word **that** in paragraph 2 refers to _____.
- A. size
B. bulk
C. atmosphere
D. density
17. Which of the following best expresses the essential information in the bold sentence in paragraph 3? Incorrect answer choices change the meaning in important ways or leave out essential information.
- A. Earth experiences greater surface pressure than Venus.
B. If a man could survive its surface pressure.
C. The surface pressure and heat of Venus are much greater than those on Earth.
D. Venus's surface temperature and pressure make it uninhabitable by humans.
18. According to paragraph 3, the greenhouse effect on Venus is owed to _____.
- A. the small amounts of nitrogen

- B. the rapid increasing amounts of carbon dioxide
- C. growing plants
- D. the high atmospheric temperatures

19. In paragraph 4, the author of the passage implies that Earth _____.

- A. might suffer the same greenhouse effect as Venus
- B. once had an atmosphere similar to Venus's
- C. has bodies of water similar to those on Venus today
- D. is experiencing a reduction of carbon dioxide emissions

20. Look at the four blanks [...] in paragraph 4 that indicate where the following sentence could be added to the passage.

Although the causes are different, the ramifications are the same.

Where would the sentence best fit?

21. The word *propagation* in paragraph 4 is closest in meaning to _____.

- A. generation
- B. elimination
- C. evaporation
- D. desecration

Questions 8 to 10: Complete the brief summary of the passage by selecting the *THREE* answer choices that express important ideas in the passage. The introductory sentence for the summary is provided bellowed.

Scientists look at Venus to predict Earth's future.

8.

9.

10.

Answer Choices

- M. Venus once had large bodies of water that elaborated and cause a rapid increase in carbon dioxide.
- N. Earth's wind has a greater velocity than Venus's because the air movement on Venus is denser and can even more large obstructions.

- O. Spaceships landing on Venus, though often crushed by Venus's atmosphere, have revealed much about its carbon dioxide filled atmosphere.
- P. If man could survive the hot temperature of Venus, then he would have to contend with the great surface pressure.
- Q. The first space probe of Venus was made in 1966.
- R. Scientists are concerned that conditions on Earth that propagate significant quantities of carbon dioxide will produce greenhouse effects similar to Venus's.

II. Read the text below and think of the word which best fits each space. Use only ONE word in each space. Write your answers on your answer sheet.
