Project work

Instructions: drag the type of project to their definition

Learning projects	Consolidation projects	Teaching projects

Project	Definition
	These projects are designed primarily for students to acquire new knowledge and skills. They often involve exploration, research, and problem-solving activities. These projects encourage learners to work collaboratively, ask questions, and find solutions, thereby fostering critical thinking and creativity.
	These projects are focused on helping others learn. These projects typically involve the preparation and delivery of instructional content. They can be a great way for learners to solidify their own understanding by teaching concepts to others.
	These projects aim to reinforce and solidify knowledge that has already been acquired. These projects usually follow a learning phase and are designed to help learners integrate what they've learned and apply it in a cohesive manner. The goal is to deepen understanding and ensure retention of key concepts
