Write *T* for True or *F* for False.

Family Traits

The color of our eyes and our hair are family traits. How big or small we are, and the shape of our face are family traits. We get our family traits from our parents. Many people have the same color eyes or color of hair, but they all look different. It's the special combination of all of these traits that makes us special. No one else has the same combination of traits that we do.

- ____ 18. Family traits come from our parents.
- ____ 19. Hair color is a family trait
- ____ 20. We get traits from our brothers and sisters.
- ____ 21. No one has the same combination of traits.

Elephant Families

Elephants live in families, too! Elephant mothers, daughters, and their babies live in families. The fathers and sons live alone or in their own families with other fathers and sons after they grow up. Elephant mothers and daughters take care of each other's babies. Babysitting helps the younger elephants learn how to care of the babies. Sometimes the elephant families are too big. Then the elephants make two families. The two new families try to stay close together. Often these families meet when drinking water or eating. They remember each other, even if they don't see each other for a long time!

- ____ 22. Female elephants _____ live in families.
a. always b. never c. sometimes
- ____ 23. Male elephants _____ live in families.
a. always b. never c. sometimes
