

Natural Resources

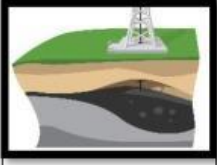

Natural resources are elements that we find in nature and that we use to satisfy our needs. These resources are very important because without them we could not live or carry out many of the activities that we do daily.

Types of Natural Resources:

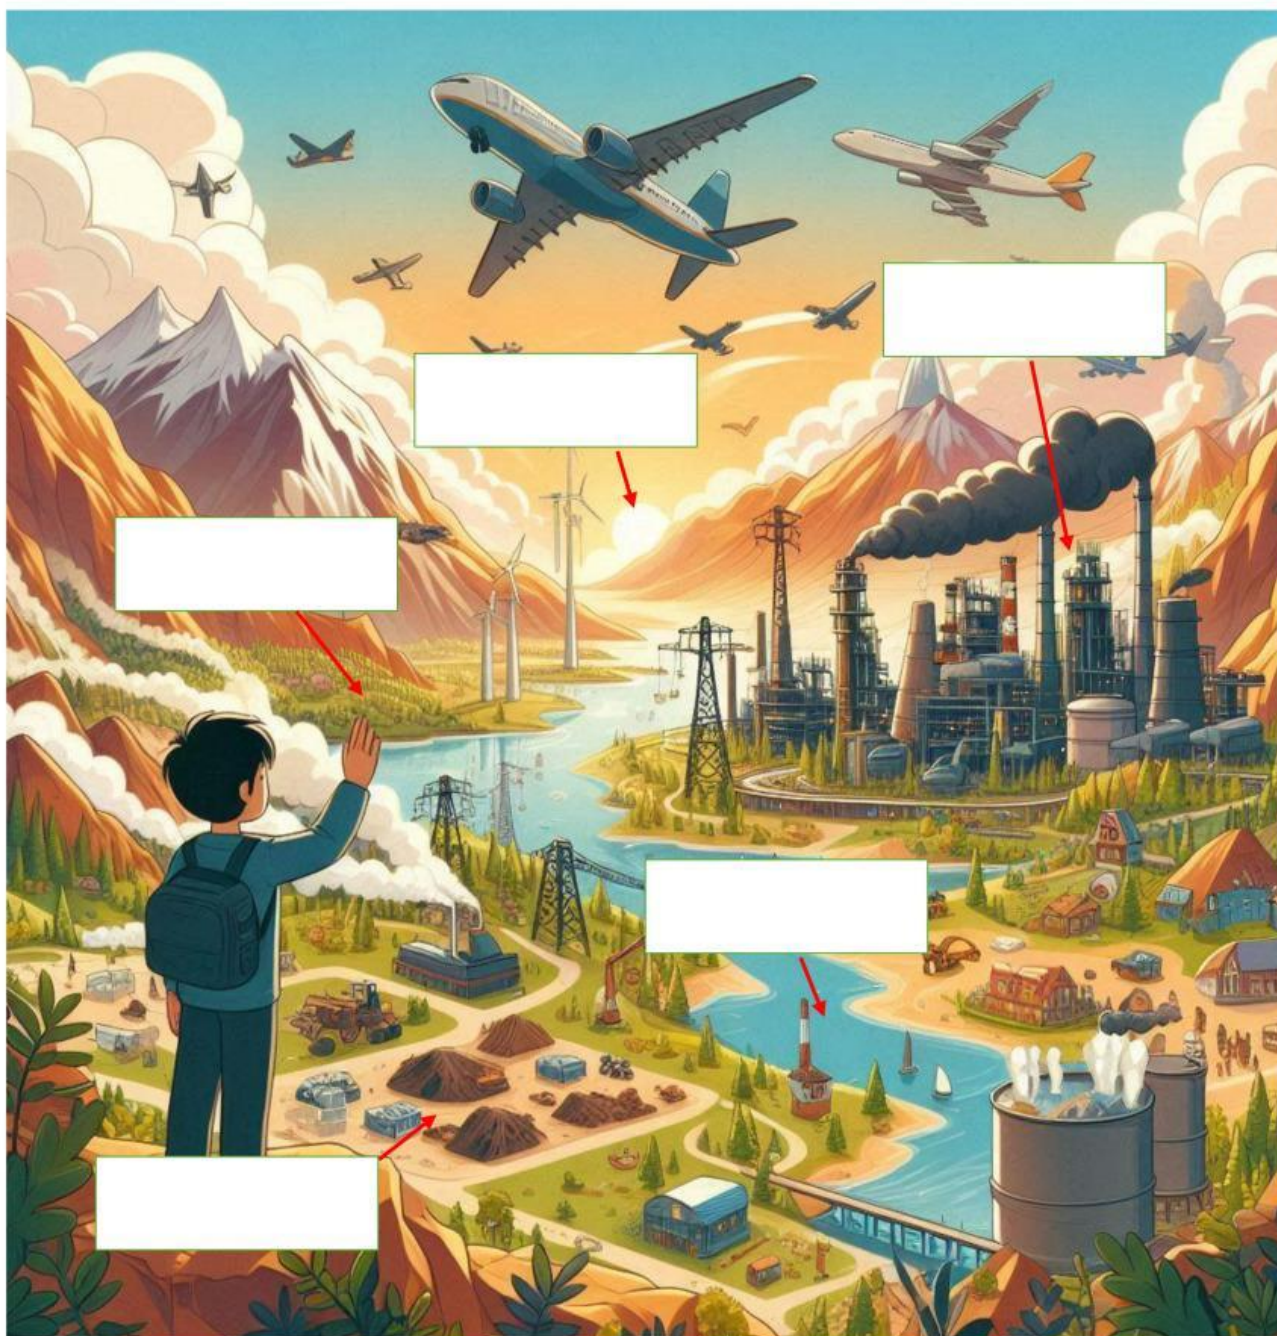

- **Renewable Resources:** Those that can be regenerated or renewed naturally in a short period of time.
- **Non-Renewable Resources:** Those that exist in limited quantities and cannot be renewed or are regenerated very slowly, compared to the human life span.

Activities

I. **LOCATION.** Place each natural resource in its box.

Natural Resources		Renewable Resources	Non-Renewable Resources
 minerals	 water		
 solar energy	 natural gas		
 trees	 petroleum		

II. MATCH. Put the name of natural resources in their proper place.

solar energy

petroleum

water

minerals

trees

III. WORD SEARCH.
