

## The Water Cycle

|                      |                          |  |   |
|----------------------|--------------------------|--|---|
| <b>evaporation</b>   | <b>groundwater store</b> | the process by which liquid turns into a gas                                     | the storage of water underground in permeable rock                                      |
| <b>precipitation</b> | <b>condensation</b>      | the process by which any form of moisture falls from the atmosphere to the Earth | the process by which water vapour turns into a liquid                                   |
| <b>infiltration</b>  | <b>interception</b>      | the process by which water moves downwards into the ground                       | the process by which plants or vegetation prevents precipitation from reaching the soil |
| <b>transpiration</b> | <b>surface run-off</b>   | the process by which water is released from the leaves of plants and trees       | the process where water moves across the surface of the land                            |
