

There are fifteen million domestic gardens in the UK, and whilst some are still managed as lifeless chemical war zones, most benefit the local wildlife, either through **benign** neglect or positive encouragement. Those that do best tend to be woodland species, and the garden lawns and flower borders, climber-covered fences, shrubberies, and fruit trees are a **plausible** alternative. Indeed, in some respects, gardens are rather better than the real thing, especially with exotic flowers extending the nectar season. Birdfeeders can also **supplement** the natural seed supply, and only the millions of domestic cats may **spoil** the scene.

*Using NO MORE THAN THREE WORDS taken from the reading passage, answer the following questions.*

1. Which type of wildlife benefits most from urban gardens?

Your answer:

2. What type of garden plants can benefit birds and insects?

Your answer:

3. What represents a threat to wildlife in urban gardens?

Your answer:
