

Cellular Respiration and Photosynthesis

Complete the sentences with the correct form of the following.

respiration – glucose – oxygen – energy – carbon dioxide – water – external
respiration – biogeochemical cycles– photosynthesis– anabolic– photosynthesis

1. The process by which the body breaks down food to release energy is called

_____.

2. _____, _____, and _____ are needed for cellular
respiration.

3. Cellular respiration produces _____, _____, and _____.

4. The exchange of gases between the organism and the environment is called
_____.

5. The cyclical exchange of gases, where one process's waste product is
another's essential input, is a fundamental principle of _____.

6. The process responsible for the conversion of inorganic carbon into organic
compounds, ultimately fueling the biosphere, is known as _____s.

7. While cellular respiration is often described as a catabolic process, it is
intrinsically linked to the _____ process of photosynthesis.

8. The oxygen released during _____ is a byproduct, but it plays a
crucial role in sustaining aerobic life on Earth.
