How to set up a new printer

1. Plug in the printer's **power cable** and make sure it's **turned on**.
2. Connect the included cable (usually a **USB cable**) from the printer to the computer.
Note: The process will be different if you're using a **wireless** printer; we'll talk more about that later on.
3. On your computer, locate the **Printer settings**. If you're using a Windows computer, you'll find these in the **Control Panel**. If you're using a Mac, you'll find them in **System Preferences**.
4. Look for the option to **Add a printer**, then follow the instructions that appear.
5. Now it's time to try printing something! For example, you could try printing **this test page**. After you click the link, select **File > Print** from your web browser's menu, or simply press **Ctrl+P** on your keyboard (or **Command+P** if you're on a Mac).
6. A dialog box will appear. Locate and select the new printer from the list, then click **Print**.
7. The item will then be printed.
