sense of hearing

long tongue

pointed nose

rainforests

nocturnal

The Giant Pangolin is a unique mammal that lives in the _____ and savannahs of Africa. It is primarily _____, which means it is active during the night and sleeps during the day. This animal has a small head and a long _____, which helps it sniff out ants and termites, its favorite food. Instead of using teeth to chew, the Giant Pangolin has a _____ that it uses to scoop up its food. Its body is covered in large brown scales, which provide protection from predators. Despite not having visible _____ ears, the Giant Pangolin has an excellent _____.
