

**DEPARTMENT OF MATHEMATICS**

**PUZZLE A DAY (2020-2021)**

**FINAL ROUND**

Group Name: .....

Year6 /Grade 5: \_\_

Write the digits on the grid so that the four calculations are correct.

The two digits on the leftmost yellow spaces should add up to the number on the red spaces below. In similar way the other three calculations should be correct. A good strategy is to start by indicating which numbers couldn't possibly go on certain places.

# GO FIGURE

A large blue title 'GO FIGURE' is at the top. Below it is a cartoon boy with orange hair and a blue shirt, pointing his right index finger towards a 4x4 grid of yellow squares. The grid is arranged in four rows: the first row has three empty squares, the second row has one empty square followed by a red '+' sign, the third row has a red '-' sign followed by one empty square, and the fourth row has a red '÷' sign followed by one empty square. Below the grid is a horizontal black line. To the right of the line is a red '=' sign followed by two empty pink squares, which are then followed by a red 'x' sign and another empty pink square. At the bottom of the page are ten numbered blue buttons from 1 to 9.

1	2	3	4	5	6	7	8	9
