TEST 1

SECTION 1

Question 1 - 10

Questions 1-6

Complete the table below.

Write **ONE WORD AND/OR A NUMBER** *for each answer.*

Beechen Festival

Date	Time	Activity	Place	Comments
June 19th	7 p.m.	Example **Concert**	the **1**	
June 20th	**2** ..... p.m.	tour	meet at the **3**	includes a visit to an old flour mill
June 21st	all day	children's **4**..... competition	Beechen Community Centre	bring a **5** .....
June 21st	evening	fireworks	by the **6**.....	

Questions 7-10

Complete the notes below.

Write **ONE WORD AND/OR A NUMBER** *for each answer.*

- This year, activities end by **7** .....p.m.
- There won't be any **8** .....in the town centre this year.
- The festival's web address iswww.9..... com.
- Festival organisers would like to receive **10**..... online.

SECTION 2 *Questions 11-20*

Questions 11-14

Choose the correct letter, ***A, B*** *or* ***C.***

Walking Holiday

11 Approximately how many passengers does the ferry hold?

- **A** 160
- **B** 600
- **C** 2000

12 Which items should the tourists pack in a separate bag?

- **A** food
- **B** reading material
- **C** medicines

13 The hostel in La Vega de Liebana has

- **A** good washing facilities.
- **B** a games room.
- **C** a number of single bedroom

14 Residents at the hostel are not allowed to

- **A** take furniture out of the hostel building.
- **B** enter the hostel after a certain time
- **C** smoke in the hostel gardens.

Questions 15-17

Complete the notes below.

Write **NO MORE THAN THREE WORDS** *for each answer.*

Globe English - 0945463900

LIVEWORKSHEETS

Clothes and equipment

Bring:

boots with thick soles

spare **15** .....

light waterproofs

suncream: strength **-16** .....

a **17** ..... folder for map, etc.

Questions 18-20

*Choose **THREE** letters, **A-G**.*

Which **THREE** of the following features of the area in Spain does the speaker talk about?

A altitude
B coastline
C economy
E temperatures
F vegetation
G wildlife

Globe English - 0945463900

LIVEWORKSHEETS

SECTION 3 Questions 21-30

Questions 21-24

Choose the correct letter, A. B or C.

Peer Assessment

21 Sally says many students see peer assessment as

- **A** a way for tutors to save time.
- **B** a useful learning tool.
- **C** a valuable form of assessment.

22 What do Steve and Sally agree is an advantage of peer assessment?

- **A** It's more reliable than self-assessment.
- **B** It increases students' self-awareness,
- **C** It builds rapport between students.

23 If the peer assessment marks seem incorrect,

- **A** students should mark the assignments again.
- **B** the tutor should check those assignments.
- **C** the marking criteria should be rewritten.

24 How were the presentations in the research project marked?

- **A** Students and lecturers marked all the presentations.
- **B** Students chose which presentations they wanted to mark, C
- **C** Lecturers marked a selection of presentations.

Questions 25 - 30

How did the following categories of student markers compare with the rest of the group when marking student presentations?

*Write the correct letter, **A, B or C,** next to questions 25-30.*

Globe English - 0945463900

LIVEWORKSHEETS

A	They gave higher marks.
B	They gave lower marks.
C	Their marks were not significantly different

Categories of student markers

25 male students marking female presenters

26 female students marking male presenters

27 female students marking female presenters

28 younger students marking older presenters

29 students marking presenters from a different university

30 students who had helped set criteria

SECTION 4

Questions 31-40

Complete the notes below.

Write **ONE WORD ONLY** *for each answer.*

Bislama - The Pidgin English Language of Vanuatu

Languages in Vanuatu

Local languages:	Actively spoken languages:	81
	Declining languages:	17
	31.....languages	8
	Total:	106
Foreign languages:	English is used in the **32** .....system	

Bislama

- It is spoken by 90% of the population today.
- In the past this language was described as **33** .....

TEST 1

READING PASSAGE 1

*You should spend about 20 minutes on **Question 1-13** which are based on Reading Passage 1 on pages **2** and **3**.*

The development of the silk industry

Silk, a natural fibre produced by a particular worm called a silkworm, has been used in clothing for many centuries.

When silk was first discovered in China over 4,500 years ago, it was reserved exclusively for the use of the emperor, his close relations and the very highest of his dignitaries. Within the palace, the emperor is believed to have worn a robe of white silk; outside, he, his principal wife, and the heir to the throne wore yellow, the colour of the earth.

Gradually silk came into more general use, and the various classes of Chinese society began wearing tunics of silk. As well as being used for clothing and decoration, silk was quite quickly put to industrial use, and rapidly became one of the principal elements of the Chinese economy. It was used in the production of musical instruments, as string for fishing, and even as the world's first luxury paper. Eventually even the common people were able to wear garments of silk.

During the Han dynasty (206 BC-220 AD), silk ceased to be a mere fabric and became a form of currency. Farmers paid their taxes in grain and silk, and silk was used to pay civil servants and to reward subjects for outstanding services. Values were calculated in lengths of silk as they had previously been calculated in weight of gold. Before long, silk became a currency used in trade with foreign countries, which continued into the Tang dynasty (616-907 AD). It is possible that this added importance was the result of a major increase in production. Silk also found its way so thoroughly into the Chinese language that 230 of the 5,000 most common characters of Mandarin[1] have 'silk' as their key component. Silk became a precious commodity, highly sought after by other countries from an early date, and it is believed that the silk trade actually existed before the Silk Roadt was officially opened in the second century BC. An Egyptian mummy with a silk thread in her hair, dating from 1070 BC, has been discovered in the village of Deir el Medina near the Valley of the Kings, and is probably the earliest evidence of the silk trade. During the second century BC, the Chinese emperor Han Wu Di's ambassadors travelled as far west as Persia and Mesopotamis, bearing gifts including silks. A range of important finds of Chinese silks have also been made along the Silk Road. One of the most dramatic of these finds was some Tang silk discovered in 1900. It is believed that around 1015 AD Buddhist monks, possibly alarmed by the threat of invasion by Tibetan people, had sealed more than ten thousand manuscripts and silk paintings, silk banners and textiles in caves near Dunhuang, a trading station on the Silk Road in north-west China.

Some historians believe the first Europeans to set eyes upon the fabulous fabric were the Roman legions of Marcus Licinius Crassus, Governor of Syria. According to certain accounts of the period, at an important battle near the Euphrates River in 53 BC, the Roman soldiers were so startled by the bright silken banners of the enemy that they fled in panic. Yet, within decades Chinese silks were widely worn by the rich and noble families of Rome. The Roman Emperor Heliogabalus (218-222 AD) wore nothing but silk. By 380 AD, the Roman historian Marcellinnus Ammianus reported that. The use of silk, which was one

[t] An ancient trade route between China and the mediterranean Sea

LIVEWORKSHEETS

confined to the nobility, has now spread to all classes without distinction - even to the lowest. The desire for silk continued to increase over the centuries. Despite this demand, the price of silk remained very high.

In spite of their secrecy about production methods, the Chinese eventually lost their monopoly on silk production. Knowledge of silk production methods reached Korea around 200 BC, when waves of Chinese immigrants arrived there. Shortly after 300 AD, it travelled westward, and the cultivation of the silkworm was established in India.

Around 550 AD silk production reached the Middle East. Records indicate that two monks from Constantinople (modern-day Istanbul), capital of the Byzantine Empire, appeared at their emperor's court with silkworm eggs which they had obtained secretly, and hidden in their hollow bamboo walking sticks. Under their supervision the eggs hatched into worms, and the worms spun silk threads. Byzantium was in the silk business at last. The Byzantine church and state created imperial workshops, monopolising production and keeping the secret to themselves. This allowed a silk industry to be established, undercutting the market for ordinary-grade Chinese silk. However, high quality silk textiles, woven in China especially for the Middle Eastern market, continued to achieve high prices in the West, and trade along the Silk Road continued as before. By the sixth century the Persians, too, had mastered the art of silk weaving, developing their own rich patterns and techniques. But it wasn't until the 13th century that Italy began silk production, with the introduction of 2,000 skilled silk weavers from Constantinople. Eventually, silk production became widespread throughout Europe.

World silk production has approximately doubled during the last 30 years in spite of man-made fibres replacing certain uses of silk. Before this period, China and Japan were the two main producers, together manufacturing more than 50 per cent of world production each year. After the late 1970s, however, China dramatically increased its silk production, and once again became the world's leading producer.

Questions 8-13

Do the following statements agree with the information given in Reading Passage 1?

In boxes 8-13 on your answer sheet, write

TRUE	*if the statement agrees with the information*
FALSE	*if the statement contradicts the information*
NOT GIVE	*if there is no information on this*

8 Their first sight of silk created fear among Roman soldiers.

9 The quality of Chinese silk imported by the early Romans varied widely.

10 The Byzantine emperor first acquired silkworm eggs from the Chinese emperor.

11 The price of high-grade Chinese silk fell due to competition from Middle-Eastern producers.

12 Silk was produced in the Middle East several centuries before it was produced in Europe.

13 Global silk production has declined in recent years.

READING PASSAGE 2

You should spend about 20 minutes on Questions 14-26, which are based on Reading Passage 2 on pages 6 and 7.

The discovery of a baby mammoth

A near-perfect frozen mammoth offers clues to a great vanished species

A On a May morning in 2007, on the Yamal Peninsula in northwestern Siberia, a Nenets reindeer herder named Yuri Khudi stood on a sandbar on the Yuribey River, looking carefully at a diminutive corpse. Although he'd never seen such an animal before, Khudi had seen many mammoth tusks, the thick corkscrew shafts that his people found each summer, and this persuaded him the corpse was a baby mammoth. It was eerily well preserved. Apart from its missing hair and toenails, it was perfectly intact. Khudi realised the find might be significant and he knew he couldn't just return home and forget all about it. He therefore decided to travel to the small town of Var Sale to consult an old friend named Kirill Serotetto. His friend took him to meet the director of the local museum, who persuaded the local authorities to fly Khudi and Serotetto back to the Yuribey River to collect the baby mammoth.

B Mammoths became extinct between 14,000 and 10,000 years ago and since the extinctions coincided with the end of the most recent Ice age, many researchers believe that the primary cause of the great die-off was the sharp rise in temperature, which dramatically altered the vegetation. 'We have strong evidence that the temperature rise played a significant part in their extinction.' says Adrian Lister, a palaeontologist and mammoth expert at London's Natural History Museum. 'In Eurasia, the timing of the two events matches closely.' The extinctions also coincided, however, with the arrival of modern humans. In addition to exploiting mammoths for food, they used their bones and tusks to make weapons, tools, and even dwellings. Some scientists believe humans were as much to blame as the temperature rise for the great die-off. Some say they caused it.

C The body of the baby mammoth was eventually sent to the St Petersburg Zoological Museum in Russia. Alexei Tikhonov, the museum's director, was one of the first scientists to view the baby, a female. According to Tikhonov, Khudi had rescued 'the best preserved mammoth to come down to US from the Ice Age', and he gratefully named her Lyuba, after Khudi's wife. Tikhonov knew that no-one would be more excited by the find than Dan Fisher, an American colleague at the University of Michigan who had spent 30 years researching the lives of mammoths. Tikhonov invited Fisher, along with Bernard Buigues, a French mammoth hunter, to come and view the baby mammoth. Fisher and Buigues had examined other specimens together, including infants, but these had been in a relatively poor state. Lyuba was another story entirely. Other than the missing hair and toenails, the only flaw in her pristine appearance was a curious dent above the trunk.

D Fisher was particularly excited about one specific part of Lyuba's anatomy: her milk tusks. Through his career, Fisher has taken hundreds of tusk samples. Most of these came from the Great Lakes region of North America, and his research showed that these animals continued to thrive, despite the late Pleistocene* temperature change. On the other hand,

---

* Pleistocene era: the time between roughly 2.6 million years ago and 10.000 years ago

LIVEWORKSHEETS

to Fisher the tusks often revealed telltale evidence of human hunting. His samples frequently came from animals that had died in the autumn, when they should have been at their peak after summer grazing, and less likely to die of natural causes, but also when humans would have been most eager to stockpile meat for the coming winter. He has done limited work in Siberia, but his analysis of tusks from Wrangel Island, off the coast of Siberia, suggests the same conclusion.

E In December 2007, Buigues arranged for the specimen to be transported to Japan to undergo a CT scan by Naoki Suzuki of the Jikei University School of Medicine. The test confirmed her skeleton was undamaged, and her internal organs seemed largely intact. It also showed that the end of her trunk, and her throat, mouth, and windpipe were filled with dense sediment. Six months later, in a laboratory in St Petersburg, Fisher, Buigues, Suzuki, Tikhonov and other colleagues began a three-day series of tests on Lyuba. During these, Fisher noted a dense mix of clay and sand in her trunk, mouth and throat, which had been indicated earlier by the scan. In fact, the sediment in Lyuba's trunk was packed so tightly that Fisher saw it as a possible explanation for the dent above her trunk. If she was frantically fighting for breath and inhaled convulsively, perhaps a partial vacuum was created in the base of her trunk, which would have flattened surrounding soft tissue. To Fisher, the circumstances of Lyuba's death were clear: she had asphyxiated. Suzuki, however, proposed a different interpretation, seeing more evidence for drowning than asphyxiation.

F Studies are ongoing, but Lyuba has begun to shed the secrets of her short life and some clues to the fate of her kind. Her good general health was shown in the record of her dental development, a confirmation for Fisher that dental research is useful for evaluating health and thus key to investigating the causes of mammoth extinction. Analysis of her well-preserved DNA has revealed that she belonged to a distinct population of Mammuthus primigenius and that, soon after her time, another population migrating to Siberia from North America would take their place. Finally, Lyuba's premolars and tusks revealed that she had been born in late spring and was only a month old when she died.

READING PASSAGE 3

You should spend about 20 minutes on ***Questions 27-40,*** *which are based on Reading Passage 3 on pages 10 and 11.*

What makes a musical expert?

How does someone become expert in music? And IS it really possible to have a 'talent' for music?

Does that class of people acknowledged to be musical experts just have more of the same basic skills we are all endowed with, or do they have a set of abilities - or neural structures - that are totally different from those of the rest of US? Are high levels of musical achievement simply the result of training and practice, or are they based on innate brain structure - what we refer to as 'talent'? Talent can be defined as something that originates in genetic structures and that is identifiable by trained people who can recognize its existence before a person has achieved exceptional levels of performance. The emphasis on early identification means that to investigate it, we study the development of skills in children.

It is evident that some children acquire skills more rapidly than others: the age of onset for walking and talking varies widely, even between children in the same household. There may be genetic factors at work, but these are closely linked with other factors - with a presumably environmental component - such as motivation and family dynamics. Similar factors can influence musical development and can mask the contribution of genetics to musical ability.

Brain studies, so far, haven't been of much use in sorting out the issues. Gottfried Schlaug at Harvard collected brain scans of individuals with absolute pitch· (AP) and showed that a region in the brain called the planum temporale is larger in these people than in others. This suggests that the planum is involved in AP, but it's not clear if it starts out larger in people who eventually acquire AP, or if the acquisition of AP makes the planum increase in size.

Results of research into the areas of the brain involved in skilled motor movement are more conclusive. Studies of violin players have shown that the region of the brain responsible for controlling the movement of the left hand (the hand that requires greater precision in violin playing) increases in size as a result of practice. We do not know yet if the propensity for increase pre-exists in some-peopled not others.

The evidence against talent comes from research on how much training the experts do. Like experts in mathematics, chess, or sports, experts in music require lengthy periods of instruction and practice. In several studies, the very best music students
Were found to have practiced more than twice as much as the others. In another study, students were secretly divided into two groups based on teachers' perceptions of their talent. Several years later, it was found that the students who achieved the highest performance ratings had practiced the most, irrespective of which 'talent' group they had been assigned to,

---

· individuals with absolute pitch: people who can identify or sing any musical note correctly without help
