

Chapter 24

Flying Friends

Birds are flying creatures. They have feathers, hollow bones and powerful muscles on their body to help them fly. Birds use a lot of energy in flying, so they need to eat a lot of food in order to keep flying.

Write the name of the bird with the help of the clues given. Pick up your answer from the help card:

1. This bird makes the longest migration, flying 30,000 - 40,000 km every year from Arctic to Antarctica and back. _____

2. This small colourful bird is an apt fisher, it dives in the river with the speed of a bullet to catch fish. _____

3. The majestic bird is found in Ander. It is the heaviest bird of prey in the world. _____

4. Unlike all other birds of its species, the bird does not like to fly, but roams its territory walking on the ground. _____
