

## Biomes Quiz

Complete each statement with the correct word from the box.

Tropical rain forest

Tundra

Desert

Grassland

Deciduous forest

Boreal forest

Biome	Climate and Organisms
	warm summers, cold winters; receives at least 50 cm of precipitation per year; trees shed their leaves and grow new ones each year
	hot in daytime, cool or cold at night; very dry; organisms are adapted to extreme temperatures and dry conditions
	warm, rainy summers; very cold winters with heavy snow; trees produce cones with seeds that are eaten by many animals
	warm temperatures do not vary much throughout the year; very wet and humid; greater variety of species than any other biome
	extremely cold winters, 10.warmer summers; windy; very dry; no trees, only low-growing plants
	receives between 25 and 75 centimeters of rain each year; populated by grasses and many large herbivores

Complete each statement with the correct word from the box.

boreal forest

climates

desert

tundra

grassland

- A biome is a group of ecosystems with similar \_\_\_\_\_ and organisms.
- Organisms that live in the \_\_\_\_\_ must be adapted to little or no rain and extreme temperatures.
- Prairies and savannas are two types of \_\_\_\_\_.
- Mosses, grasses, dwarf forms of a few trees, insects, birds, and a few mammals live on the \_\_\_\_\_ biome.
