

- A factor is a number which divides exactly into another number with no remainder.
- All positive integers (except for 1) have at least 2 factors (1 and the number itself).

Examples

$3 \times 4 = 12$ so 3 and 4 are factors of 12

$5 \times 6 = 30$ so 5 and 6 are factors of 30

$4 \times 7 = 28$ so 4 and 7 are both factors of 28
