How to Use a Voltage Tester Safely

1. Before starting, plug the router into a power source and connect it to your computer using an Ethernet cable.
2. Open a web browser and enter the router's IP address to access its settings.
3. After that, log in with the default username and password provided in the router's manual.
4. Once logged in, configure the network settings, such as the SSID and password for the Wi-Fi.
5. Save the settings and restart the router to apply the changes.
