

THE IMMUNE SYSTEM

Hello guys!

Today we are going to talk about the Immune system. But first, you have to look a video.

According to the video, this system is a network of cells, tissues and organs that defend the body against harmful toxins and microorganisms.

The immune system protects your body from outside invaders. These include germs such as bacteria, viruses, and fungi, and toxins (chemicals made by microbes).

There are 2 main parts of the immune system:

- **The innate immune system.** You are born with this.
- **The adaptive immune system.** You develop this when your body is exposed to microbes or chemicals released by microbes.

Lesson Checkpoint. -

Part 1 - Fill in the blanks

- The immune system is made up of a network of _____, _____, and _____ that work together to protect the body.
- There are 2 main parts of the immune system: The _____ immune system and the _____ immune system.

Part 2: True or False

Choose **True** or **False** for each statement:

1. The spleen filters lymph fluid from bacteria and viruses. True / False
2. Lymph nodes act as *waste treatment centers* for the body. True / False
3. The thymus gland filters blood. True / False
4. The immune system protects your body from inside invaders. True / False

Part 3: Matching names

Look at the picture and match with it names.
