

Reading task: Educational Technology Trends and Their Impact

In recent years, technology has become an important part of education. Many schools now use digital tools such as tablets, smart boards, and educational apps to help children learn. These tools can make lessons more fun and interactive. For example, in a primary school, students use a tablet app to learn math through games. This makes learning enjoyable and helps children understand concepts faster.

However, using technology in the classroom can have both positive and negative effects. A successful case is a nursery school where teachers use educational videos to teach colors and shapes. The videos are short, engaging, and help young children remember what they learn. These tools work well when teachers know how to use them properly and make them a part of their lesson plans.

On the other hand, technology is not always helpful. In some primary schools, teachers rely too much on apps without explaining the lessons. This can confuse students, especially when they don't understand the content. One example is a school where children used a reading app without guidance from the teacher. The students struggled because they didn't know how to use the app correctly or what they were learning.

Overall, technology can be a powerful tool in education if used correctly. It's important for teachers to balance traditional teaching methods with technology. This helps students get the best learning experience.

Reading Comprehension Questions:

1. Remembering (Bloom's Level 1)

- **Q:** What are two examples of educational technology mentioned in the text?

2. Understanding (Bloom's Level 2)

- **Q:** Why do the children enjoy learning math through the tablet app?

3. Applying (Bloom's Level 3)

- **Q:** Give an example of how you could use a smart board in a lesson for primary students.

4. Analyzing (Bloom's Level 4)

- **Q:** What is the difference between the effective and non-effective use of technology in the classroom according to the text?

5. Evaluating (Bloom's Level 5)

- **Q:** Do you think using apps to teach children is always a good idea? Why or why not?
