

### **Daily Review – Week 12 – Day 1**

You may not use a calculator to answer these questions.

|    |                                                                                                                                                            |                                         |
|----|------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------|
| 1. | Find $7576 \div 8$                                                                                                                                         |                                         |
| 2. | Solve: $6x = 48$                                                                                                                                           | $x = \underline{\hspace{2cm}}$          |
| 3. | Calculate $724.1 \div 100$                                                                                                                                 |                                         |
| 4. | Find the area of the following:<br>                                       | $\underline{\hspace{2cm}} \text{ cm}^2$ |
| 5. | Change 740 mm into cm.                                                                                                                                     | $\underline{\hspace{2cm}} \text{ cm}$   |
| 6. | Put the following numbers in order from smallest to largest:<br>$- 76, 54, 24, 82, 25, - 49$                                                               |                                         |
| 7. | Calculate $225 \times 2$                                                                                                                                   |                                         |
| 8. | State which angle is being described below:<br>Less than $90^\circ$<br> |                                         |
