Britain – the sweet-toothed nation!

Before the Industrial Revolution, sweets and chocolates were made by hand. They were expensive luxury items which only rich people could buy. The Industrial Revolution changed this because very large amounts of sweets and chocolates could be made by machines in factories and that made them much cheaper.

The first chocolate bar was invented by Joseph Fry in 1847 and milk chocolate was invented in 1875. The best-selling chocolate bar in the UK now is Dairy Milk, which Cadbury's have made since 1905. The largest chocolate bar ever made was made by the British chocolate company Thornton's in 2011 to celebrate their 100th birthday. It was four metres long, four metres wide, and weighed almost six tonnes!

Today the UK is one of the biggest consumers of sweets, chocolates, cakes, and desserts in Europe. The famous British 'sweet tooth' (love of sugary things) means that British people eat about 669,000 tonnes of chocolate each year – around 11 kg per person – and they spend £4 billion every year on it.
