

Self Evaluation	Level 3	Module 4	Task 1	Class
	Student			Date

1. Select the correct answer

1. You can connect to the router	<input type="radio"/> only a PC <input type="radio"/> an analog phone device <input type="radio"/> as many devices as you want wirelessly
2. To transfer multi-channel audio and HD video to a TV we use a(n)	<input type="radio"/> RCA cable <input type="radio"/> SCART cable <input type="radio"/> HDMI cable
3. A VGA cable transfers	<input type="radio"/> video only <input type="radio"/> audio only <input type="radio"/> video and audio
4. A DVI cable transfers	<input type="radio"/> video only <input type="radio"/> audio only <input type="radio"/> video and audio
5. A DisplayPort cable transfers	<input type="radio"/> video only <input type="radio"/> audio only <input type="radio"/> video and audio
6. To connect a Blue-ray player to a TV we use a(n)	<input type="radio"/> SCART cable <input type="radio"/> HDMI cable <input type="radio"/> RCA cable
7. USB 3.0 is	<input type="radio"/> yellow <input type="radio"/> blue <input type="radio"/> white
8. Without a home network we cannot operate the following technology:	<input type="radio"/> DLNA <input type="radio"/> BLUETOOTH <input type="radio"/> NFC
9. The most secure wireless transmission of data is performed with	<input type="radio"/> BLUETOOTH <input type="radio"/> NFC <input type="radio"/> Wi-Fi
10. A cell phone battery can be charged using the following port:	<input type="radio"/> Thunderbolt <input type="radio"/> Ethernet <input type="radio"/> USB

2. Put a ☒ if the sentence is correct

1. You can wirelessly connect up to 4 devices to a router.	<input type="checkbox"/>
2. You can connect a switch directly to your DSL phone line.	<input type="checkbox"/>
3. Devices that use Wi-Fi communicate faster than those connected to a network with an Ethernet cable.	<input type="checkbox"/>
4. Connecting devices to a network with Ethernet cables is more stable than with a Wi-Fi connection.	<input type="checkbox"/>
5. The use of wireless devices (e.g. cell phones) may interrupt communication between Wi-Fi connecting devices.	<input type="checkbox"/>
6. In Wi-Fi communication the most secure protocols is WEP or WPA.	<input type="checkbox"/>
7. A VGA cable transfers analog signal to a TV or monitor.	<input type="checkbox"/>
8. When the security protocol WPA2 is enabled, then the access network requires a password.	<input type="checkbox"/>
9. A Cat 5E Ethernet cable is protected from electromagnetic interference.	<input type="checkbox"/>
10. If a TV is DLNA - certified it can show a movie that is stored on a smartphone without these devices having to be connected to a home network.	<input type="checkbox"/>
11. A hands-free headset and a cell phone can share files between them via Bluetooth technology, without these devices having to be connected to a home network.	<input type="checkbox"/>
12. Two devices that use NFC technology can exchange files if you touch their surfaces together or are within a few inches of each other.	<input type="checkbox"/>
13. Bluetooth, NFC and Wi-Fi use electromagnetic waves for file transmission.	<input type="checkbox"/>
