

When adding and subtracting 4 digit numbers we usually round to the nearest 100.

$$\begin{array}{lll} 4567 + 2212 = & 4547 - 2262 = & 4547 - 1942 = \\ 4600 + \underline{\quad\quad} = 6800 & 4500 - \underline{\quad\quad} = 2200 & \quad - \quad = \underline{\quad\quad} \end{array}$$

$$\begin{array}{lll} 3727 + 2162 = & 6427 + 1932 = & 6651 - 2342 = \\ + & + & - \\ = & = & = \end{array}$$

When multiplying a 3 digit number by a 1 digit number we only round the 3 digit number to the nearest H

$$\begin{array}{lll} 417 \times 5 = & 657 \times 5 = & 416 \times 4 = \\ \underline{\quad\quad} \times 5 = \underline{\quad\quad} & \quad \times \quad = & \quad \times \quad = \end{array}$$

When dividing a 4 digit number by a single digit number we round to the nearest H that is the closest multiple of the number we are dividing by.

$$\begin{array}{lll} 1332 / 4 = & 1847 / 5 = & 1747 / 5 = \\ \underline{\quad\quad} / 4 = 300 & \quad / \quad = 400 & \quad / \quad = \end{array}$$
