LIVEWORKSHEETS

JOIN ACTIVITY: NATURAL DISASTER

A sudden and heavy rainfall that leads to water overflow	Hurricane
A severe weather event characterized by strong winds and hail	Flood
A prolonged period of abnormally low rainfall	Avalanche
Sudden shaking of the ground caused by seismic activity	Freezing Rain
A large mass of snow and ice that falls rapidly down a mountain	drought
A phenomenon caused by the accumulation of ice on power lines and trees	Earthquake

LIVEWORKSHEETS

READING ACTIVITY: MULTIPLE CHOICE

Natural disasters are catastrophic events that occur due to natural processes of the Earth, causing significant damage to the environment and human life. These events include a variety of phenomena such as earthquakes, hurricanes, tornadoes, floods, wildfires, and volcanic eruptions. Each type of disaster has its own unique characteristics and impacts, often leading to loss of life, destruction of property, and long-term economic challenges for affected communities. The unpredictability of natural disasters makes them particularly dangerous, as they can strike suddenly and with little warning, highlighting the importance of preparedness and effective response strategies to mitigate their effects.

---

1. What is the primary cause of natural disasters?

a) Human activities b) Natural processes of the Earth c) Extraterrestrial events

2. What is a significant consequence of natural disasters?

a) Increased biodiversity b) Economic growth c) Loss of life

3. Why are natural disasters particularly dangerous?

a) They are always predictable. b) They can strike suddenly and with little warning.
