

## TASK 8: WHAT IS MENSTRUATION?

Read and complete the text with the following words

menstruation

ovule

month

days

blood

If the \_\_\_\_\_ is not fertilised, it is expelled to the outside of the body through the \_\_\_\_\_, accompanied by a small amount of \_\_\_\_\_ and tissues.

This natural process is called \_\_\_\_\_ and happens once a \_\_\_\_\_ about every 28 days. It can last two or three \_\_\_\_\_ until a whole week.

## TASK 9: WHAT HAPPENS AFTER FERTILISATION?

At the beginning of pregnancy, two essential organs for the fetus are formed: the placenta and the amniotic sac.

Look at the picture and label it with the following words.

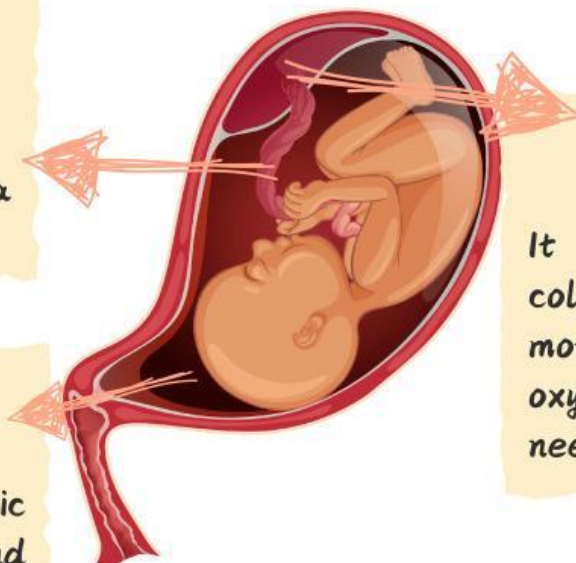

umbilical cord

amniotic sac

placenta

It joins the placenta to the fetus.

It contains the amniotic fluid that surround and protects the embryo.

It is a tissue that collects, from the mother's blood, the oxygen and nutrients needed by the embryo.
