

PARTS OF A PLANT

1. What are the main parts of a plant?

All plants have roots, a stem and leaves.

2. What is the function of roots?

Roots fix the plant in the ground. They absorb water and nutrients from the soil. They also store food for the plant.

3. What is the function of the stem?

The stem supports the plant. It carries water and nutrients to all parts of the plant.

4. What are the 2 different types of stems?

Herbaceous stems, they are thin, soft and flexible.

Woody stems, they are hard and rigid.

5. What is the function of leaves?

Leaves are responsible for making food for the plant.

They have two parts the blade and the petiole.
