Read the following passage and mark the letter A, B, C, or D on your answer sheet to indicate the correct answer to each of the questions from 39 to 43.

Culture is the lens through which we evaluate everything around us; we evaluate what is proper or improper, normal or abnormal, through our culture. If we are immersed in a culture that is unlike our own, we may experience culture shock and become disoriented when we come into contact with a fundamentally different culture. People naturally use their own culture as the standard to judge other cultures; however, having our own judgment could lead us to discriminate other cultural values **which** are different from our own because we do not understand them.

Cultural diversity is important because our country, workplaces, and school increasingly consist of various cultural, racial, and ethnic groups. We can learn from one another, but first we must have a level of understanding about each other in order to facilitate collaboration and cooperation. Learning about other cultures helps us understand different perspectives within the world in which we live and helps **dispel** negative stereotypes and personal biases about different groups.

In addition, cultural diversity helps us recognize and respect "ways of being" that are not necessarily our own, so that we interact with others, we can build bridges to trust, respect, and understanding across cultures. Furthermore, this diversity makes our country a more interesting place to live, as people from diverse cultures contribute language skills, new ways of thinking, new knowledge, and different experiences.

Question 43: According to the passage, which of the following do people from diverse cultures NOT contribute to a country?

- A. new ways of thinking B. a more interesting place
C. language skills D. different experiences

Read the following passage and mark the letter A, B, C, or D on your answer sheet to indicate the correct answer to each of the questions from 44 to 50

If you go back far enough, everything lived in the sea. At various points in evolutionary history, enterprising individuals within many different animal groups moved out onto the land, sometimes even to the most parched deserts,

taking their own private seawater with them in blood and cellular fluids. In addition to the reptiles, birds, mammals and insects which we see all around us, other groups that have succeeded out of water include scorpions, snails, crustaceans such as woodlice and land crabs, millipedes and centipedes, spiders and various worms. And we mustn't forget the plants, without whose prior invasion of the land, none of the other migrations could have happened.

Moving from water to land involved a major redesign of every aspect of life, including breathing and reproduction. Nevertheless, a good number of thoroughgoing land animals later turned around, abandoned their hard-earned terrestrial re-tooling, and returned to the water again. Seals have only gone part way back. They show us what the intermediates might have been like, on the way to extreme cases such as whales and dugongs. Whales (including the small whales we call dolphins) and dugongs, with their close cousins, the manatees, **ceased** to be land creatures altogether and reverted to the full marine habits of their remote ancestors. They don't even come ashore to breed. They do, however, still breathe air, having never developed anything equivalent to the gills of their earlier marine **incarnation**. Turtles went back to the sea a very long time ago and, like all vertebrate returnees to the water, they breathe air. However, they are, in one respect, less fully given back to the water than whales or dugongs, for turtles still lay their eggs on beaches.

There is evidence that all modern turtles are descended from a terrestrial ancestor which lived before most of the dinosaurs. There are two key fossils called *Proganochelys quenstedti* and *Palaeochersis talampayensis* dating from early dinosaur times, which appear to be close to the ancestry of all modern turtles and tortoise. You might wonder how we can tell whether fossil animals lived in land or in water, especially if only fragments are found. Sometimes it's obvious. Ichthyosaurs were reptilian contemporaries of the dinosaurs, with fins and streamlined bodies. The fossils look like dolphins and **they** surely lived like dolphins, in the water. With turtles it is a little less obvious. One way to tell is by measuring the bones of their forelimbs.

Question 44: Which of the following best serves as the main idea for the passage?

- A. The relationship between terrestrial species and marine creatures.
- B. The reasons why species had to change their living place.
- C. The evidences of the time marine animals moved to land.
- D. The evolution of marine species in changing places to live.

Question 45: As mentioned in paragraph 2, which of the following species returned to the water least completely?

- A. Manatees B. Whales C. Dugongs D. Turtles

Question 46: The word "**ceased**" in paragraph 2 mostly means _____.

- A. got familiar B. soon became
- C. stopped happening or existing D. began to happen or exist

Question 47: The word "**incarnation**" in paragraph 2 could be best replaced by _____.

- A. evolution B. ancestor C. natural selection D. embodiment

Question 48: According to the passage, which of the following is NOT true?

- A. Apart from breathing and breeding, marine species were expected to change nothing to live on land.
- B. Seals are able to live on land and in the water.
- C. Some terrestrial habits were remained when the species reverted to water life.
- D. *Proganochelys quenstedti* and *Palaeochersis talampayensis* appear to be close to the ancestry of all modern turtles and tortoise.

Question 49: What does the word "**they**" in the last paragraph refer to?

- A. dolphins B. fragments C. ichthyosaurs D. turtles

Question 50: It can be inferred from the passage that _____.

- A. it's clear to determine the living places of all species through the fragments found
- B. the body features of the fossil animals help scientists to distinguish the terrestrial and marine species
- C. turtles' ancestor and dinosaurs became extinct contemporarily
- D. the fossils of turtles and tortoises might have the similar appearances with dolphins
