

DRILLING AND COMPLETION OF OIL AND GAS WELLS WORKSHOP

1. Oil and Gas Well Drilling: A Simple Explanation

Drilling for oil and gas is an important job around the world. Different countries drill for oil and gas in different ways and at different places. The drilling equipment can be big or small, and you can find oil and gas deep underground or under the sea.

The great thing about drilling is that it helps us get fuel for cars, gas for cooking, and oil for many products. The drilling process is not too difficult if you have the right tools and follow the steps.

To drill a well, you need a drill rig, a drill bit, pipes, and drilling fluid. You also need safety equipment like helmets and gloves.

Steps to Drill a Well:

1. **Prepare the Area:** Clear the ground and set up the **drill rig**.
2. **Start Drilling:** The **drill bit** cuts into the ground, going down to find **oil or gas**.
3. **Add Drilling Fluid:** This fluid keeps the **drill bit** cool and brings **rock pieces** to the surface.
4. **Check the Well:** Make sure the **well** is safe and working properly.
5. **Get the Oil or Gas:** Once ready, the oil or gas is **pumped up** through the **pipes**.

When the **well is ready**, oil and gas can be used to **produce energy** for homes, cars, and industries.
