

EVAPORATION

COLLECTION

CONDENSATION

THE WATER CYCLE

PRECIPITATION

It is when the water vapor gets cold and transforms into clouds made of tiny drops of water.

It is when the sun warms the water and it evaporates. The water transforms into water vapor and flies to the sky.

It is when the rain falls to the ground and the water goes to the ocean again.

It is when the clouds the cloud is full of water and it starts to rain or snow!
