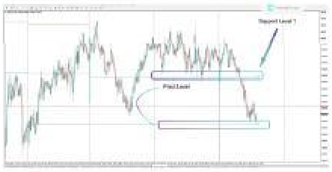
Pivot Points All-in-One Indicator for MetaTrader 4 Download - Free - [TradingFinder]



The **Pivot Points All-in-One** Indicator is a practical tool for identifying **pivot points** and **MT4 Support and resistance indicator**, designed for the MetaTrader 4 (MT4) platform. This indicator calculates pivot points based on the previous day's high, low, and close prices and plots the pivot point line (displayed in blue).

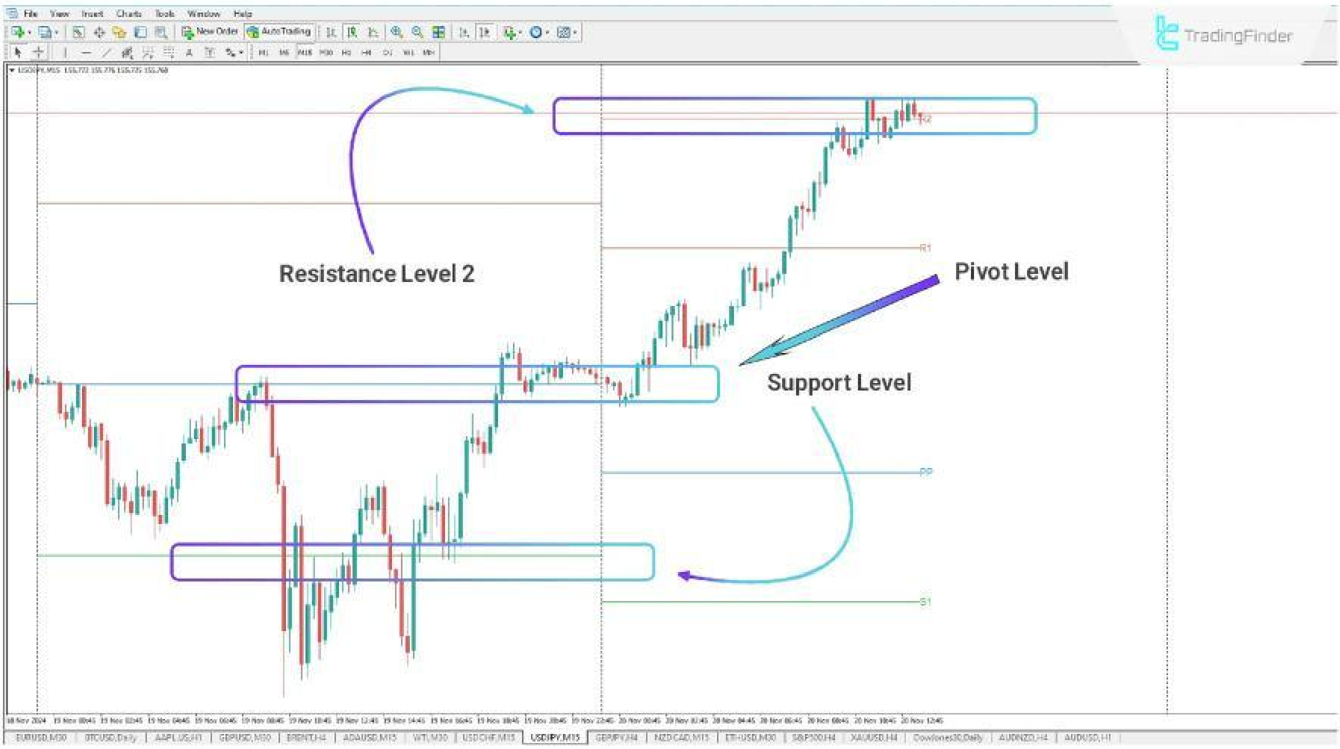
- Resistance levels are displayed as red lines.
- Support levels are displayed as green lines.

These levels serve as high-priority areas on the chart where prices often react. Traders can use this indicator to identify **entry** and **exit points** and analyze price behavior near these levels.

Pivot Points Indicator Table

Category	**Pivot Points and Fractals - Levels - Support/Resistance**
Platform	MetaTrader 4
Skill Level	Intermediate
Indicator Type	Leading - Reversal - Entry
Time Frame	1-Minute - 5-Minute - 15-Minute
Trading Style	Scalping - Day Trading - Intraday Trading
Markets	Forex - Cryptocurrencies - Indices

Bullish Trading Levels



USD/JPY 15-Minute Chart

In the **15-minute USD/JPY** chart, the price breaks above the **pivot level** pulls back to it, and then resumes its upward trend.

The **Pivot Points All-in-One Indicator**:

- Accurately plots **support** (green) and **resistance** (red) levels.
- Displays reaction zones.

In this case:

- The price crossing above the pivot indicates a shift to an uptrend.
- A pullback to the pivot confirms its strength and provides an opportunity for entering buy trades.

Traders can:

- Use subsequent resistance levels as price targets (take profit).
- Anticipate potential price reactions around these levels.

Due to its simplicity and effectiveness, this indicator is a valuable tool for making decisions in short-term trades and leveraging key **price levels**.

Bearish Trading Levels

NZD/CAD 15-Minute Chart

In the **15-minute NZD/CAD** chart, the price initially touches the **pivot level** and, failing to break through, begins a downward trend. After breaking below the pivot level, the downtrend sharply continues.

The **Pivot Points All-in-One** Indicator:

- Highlights the pivot level as a **critical zone**, with its **breach** confirming a trend **reversal**.
- Displays **support** and **resistance** levels where the price is likely to react.

In this scenario:

- The initial rejection at the pivot level signals early signs of price weakness.
- After breaking below the pivot, the downtrend intensifies.
- The price eventually reacts positively to one of the **support levels** displayed by the indicator.

This indicator:

- It helps traders identify **high-risk** and **high-potential** zones by highlighting key levels.
- It is a simple yet effective tool for making trading decisions, setting price targets, and placing **stop-loss** orders.

Indicator Settings

XAU/USD 30-Minute Chart

Display_Settings: Customizes graphical and visual chart settings;

- **Chart_Theme**: Select a chart theme (e.g., light or dark);

Indicator_Settings: General indicator operation settings;

- **Support_Color**: Set support line colors;
- **Resistance_Color**: Set resistance line colors;
- **Line_Labels**: Toggle label display on lines.

Conclusion

The **Pivot Points All-in-One** Indicator is a practical and effective tool for traders seeking to identify vital and significant **market levels**. This **Metatrader4 indicator** allows traders to pinpoint **support** and **resistance levels** and use them to set **take-profit** and **stop-loss** levels. By calculating pivot points and visually displaying these levels on the chart, traders can perform more accurate analyses and identify better trading opportunities.
