

### Emperor Penguin Families

Emperor penguins live in Antarctica in large groups called colonies. Female emperor penguins lay one egg. They give their eggs to the father penguins. They take care of the eggs while the females go to the sea to catch fish. After two months, the eggs hatch and the mother penguins return with food for the chicks.

twins:

two brothers or sisters in the same family

three brothers or sisters born at the same time

two brothers or sisters born at the same time

### Families with Twins

Families have twins when the mother has two babies at the same time. Twins can be two brothers, two sisters or one brother and one sister. These siblings can look very similar or they can look different. Identical twins have the same DNA, but they never have the same fingerprints. If a pair of twins is born around 12 a.m., they can have different birthdays!
