

ATR Trailing Stop (TSL) Indicator MT4 Download - Free - [TradingFinder]

The ATR Trailing Stop indicator is one of the [MetaTrader 4 indicators](#) used for trade risk **management**. This indicator creates a moving stop loss using the market's **Average True Range (ATR)**, which automatically adjusts based on price fluctuations.

As market volatility changes, the **ATR Trailing Stop moves** the stop loss automatically in favor of traders. In an uptrend, the **stop loss** is plotted in green, and in a downtrend, it is plotted in red.

Indicator Specifications Table

The important features and parameters of the indicator can be seen in the table below:

Category	Price Action - High Volatility - Trading Tools
Platform	MetaTrader 4
Skill Level	Beginner
Indicator Type	Reversal
Time Frame	Multi timeframe
Trading Style	Swing Trading
Market	All Markets

ATR TSL Indicator at a Glance

The **ATR Trailing Stop** Indicator adjusts based on market volatility using the **Average True Range (ATR)** and plots **stop losses** at critical points. When used alongside other technical analysis tools, this highly functional indicator helps **traders enter** trades with more optimized stop losses for better **market analysis**.

Uptrend Conditions

The price chart of the **GBP/USD** currency pair in the 1-hour time frame demonstrates how this indicator functions in an uptrend. As shown in the image, the market's **Average True Range (ATR)** also rises as the price increases.

This increase in ATR decreases the gap between the stop loss and the price. Additionally, the **Trailing Stop Loss (TSL)** dynamically moves upward as the price rises.

Downtrend Conditions

The cryptocurrency Bitcoin (**BTC**) price chart in the 4-hour time frame demonstrates how this indicator functions in a downtrend. As shown in the image, the market's Average True Range (ATR) also **drops** as the price decreases.

This drop in ATR decreases the gap between the stop loss and the price. Additionally, the **Trailing Stop Loss (TSL)** dynamically moves **downward** as the price declines.

How the indicator functions in a downtrend

Settings

The advanced options in the settings section of the ATR Trailing Stop Loss (ATR TSL) indicator are as follows:

- ↳ **Inp Period:** Input period set to 10;
- ↳ **Inp Coeff:** Input coefficient set to 4.0.

Conclusion

With its dynamic and intelligent stop loss adjustments, the **ATR Trailing Stop Indicator** in MetaTrader 4 offers better control over trades while alerting traders to sudden and sharp market changes.

A proper understanding of how this highly **volatile indicator** works and its appropriate use can play a significant role in improving **overall** trading **performance** and **preserving** capital.
